

GNFAC Avalanche Forecast for Mon Jan 21, 2019

Good morning. This is Alex Marienthal with the Gallatin National Forest Avalanche Forecast issued on Monday, January 21st at 7:00 a.m. Today's forecast is sponsored by [Yellowstone Club Community Foundation](#) and [Bridger Bowl](#). This forecast does not apply to operating ski areas.

Mountain Weather

Since yesterday morning the mountains received 9" of snow near Cooke City, 6-9" from Big Sky to West Yellowstone, 4" in the Bridger Range and 2" in hyalite. Yesterday evening wind gusted 40-50 mph out of the southwest, and this morning wind shifted west to northwest at 5-15 mph. Today, temperature will decrease from mid 20s F this morning to teens F this afternoon. Wind will be northwest to northeast at 15-25 mph. Snow showers through tonight will deliver 6-8" to the mountains near Bozeman, Big Sky and Cooke City with 1-2" near West Yellowstone.

Snowpack and Avalanche Discussion

Bridger Range

Since Friday morning the Bridger Range received 18-20" of snow equal to 2.1" of [snow water equivalent](#) (SWE). On Friday a skier was buried to his waist in an avalanche near Fairy Lake ([details](#), [video](#)). Saturday on Saddle Peak there were three skier triggered avalanches and one natural avalanche ([details](#), [details](#)). Yesterday, there were two large natural slides and at least one skier triggered avalanche on Saddle Peak ([details](#), [details](#)), and a skier remotely triggered an avalanche in Frazier Basin ([details](#)). All these avalanches consisted of new snow. Ian and I skied near the Throne yesterday. The dense 18" slab of new snow was enough of a red flag for us to ride low angle slopes (less than 30-33 degrees) ([video](#), [photo](#)). An additional four to six inches of snow this morning makes avalanches of new snow, greater than two feet deep, easy to trigger and possibly break naturally today. Avalanche danger is [CONSIDERABLE](#).

Southern Madison Southern Gallatin Lionhead Range Island Park

In the mountains near West Yellowstone and south of Big Sky the snowpack is poorly supported by 1.5' of weak, sugary facets on the ground ([video](#)). Since Saturday these mountains got 10-14" of snow equal to 1-1.5" of SWE. Strong wind last night drifted this snow into thick slabs, followed by loading from more snow this morning. This recent load on an unstable snowpack makes it easy to trigger avalanches 2-3' deep that can propagate hundreds of feet wide. Avalanches can be triggered from lower angle terrain below steep slopes. Slopes with thick drifts are the most likely place to trigger an avalanche, but all steep slopes are dangerous ([photo](#), [details](#)). Avoid travel on and underneath steep slopes. Today, human triggered avalanches are likely and avalanche danger is [CONSIDERABLE](#).

Cooke City

Yesterday Doug and his partner rode north of Cooke City. They found stability is getting worse than when I was there on Saturday ([my video](#)). The new snow cracked under their skis and they got unstable test results. Both indicate avalanches of new snow are easy to trigger ([Doug's video](#)). They also found weak, sugary snow on some slopes that makes deeper, larger avalanches possible. Since yesterday morning 10-12" of new snow added the weight of 1" of SWE. Thick slabs of new and wind-drifted snow are easy to trigger today and could break deeper and wider on buried weak layers. Avalanche danger is [CONSIDERABLE](#).

Northern Gallatin Northern Madison

The mountains around Hyalite and near Big Sky got the short end of storms over the weekend. They were not entirely left out however, and 10-14" of snow since Thursday will be drifted into slabs that are easy to trigger. On non-wind loaded slopes, slabs and loose avalanches of new snow are possible. Avalanches can break larger on weak layers buried 1.5-2' deep ([video](#), [video](#)). Carefully assess the snowpack and consequences of being caught in a slide before riding steep slopes. Avalanche danger is [CONSIDERABLE](#) on wind loaded slopes and [MODERATE](#) on other slopes.

Skier killed in avalanche in Utah

On Friday a skier was buried and killed in an avalanche in Utah. He and his partner were not wearing avalanche transceivers. Details from the Utah Avalanche Center are [HERE](#).

Upcoming Avalanche Education and Events

Our education calendar is full of awareness lectures and field courses. Check it out: [Events and Education Calendar](#).

BOZEMAN

January 23, 24 and 26, **Advanced Avalanche Workshop w/ Field Day**, [Info and Register Here](#).

February 2, **King and Queen of the Ridge** at Bridger Bowl (fundraiser). [Register with Bridger](#) to hike in the event, and [create a pledge page](#) to raise funds with your Ridge laps.

BIG SKY

January 22, **Pint Night at Beehive Brewery**, 4-8 p.m. A fundraiser for the [Darren Johnson Avalanche Education Memorial Fund](#).

WEST YELLOWSTONE

January 26, **1-hr Avalanche Awareness for Snowmobilers**, 7-8 p.m. Holiday Inn West Yellowstone.

DILLON

January 22, **1-hr Avalanche Awareness**, 6:30-7:30 p.m. U.M. Western Library.

BILLINGS

January 22, **1-hr Avalanche Awareness**, 6-7 p.m. The Base Camp, Billings.

COOKE CITY

Every Friday and Saturday, **Rescue Training and Snowpack Update**. Friday 6:30-7:30 p.m. at the Soda Butte Lodge. Saturday anytime between 10-2 @ Round Lake.
