

Natural Saddle west side

Bostwick Creek

Bridger Range

3/2/2019

Code

HS-N-R3-D3.5-O

Elevation

8800

Aspect

NW

Latitude

45.79640

Longitude

-110.93800

Notes

From BBSP on 3/2/19: "Large natural avalanche pulled out last night/early morning on the backside of north peak of saddle peak in Bostwick canyon, the [slide](#) path is known as the 'Y' to local skiers and hasn't run this year, or been skied. Crowns looked to be 3-6ft, it ran further than anything i've seen there in the past decade, knocking over small trees and some old standing dead in the run out. R3 D3.5."

Number of slides

1

Number caught

0

Number buried

0

Avalanche Type

Hard slab avalanche

Trigger

Natural trigger

R size

3

D size

3.5

Bed Surface

O - Old snow

Problem Type

Persistent Weak Layer
