

Crown Profile Lulu Pas
 Cooke City
 MT
 Elevation: 9984 ft
 Aspect: 177°

Alex Marienthal
 01/30/2020 - 1:24pm
 Co-ord: 45.07237N, -109.95559W
 Slope Angle: 20°
 Wind Loading: **yes**

Stability: **Poor**
 Air Temperature:
 Sky Cover: **FEW**
 Precipitation: **NO**
 Wind: **N Moderate**

HS:142 Layer Notes:
 105-100cm: **Avy broke here**
 105-100cm: **Problematic layer**
 65-63cm: **Deeper slides possible**

Specifics: Pit is adjacent to avalanche: crown; Collapsing, localized; Cracking; Recent activity on similar slopes

Notes: Triggered this avalanche while approaching low angle terrain from top of slope to dig a pit. AFr-SS-R2-D2-S. 100' wide x 70' long, Crown thick.

Lower ECTP21 on facets broke when I put shovel behind column to shear off first ECTN. Recorded as ECTP because it collapsed a extra force when shovel was placed behind column (estimated ECTP 21).

Advisory Region
 Cooke City
 Longitude
 -109.96W
 Latitude
 45.07N

Avalanche Details: [Human triggered wind slab on Lulu](#)
 Cooke City, 2020-02-02
