Woody Ridge, Cooke City

Date Mon, 11/16/2020 - 10:59 Activity Skiing

Generally stable snowpack observed. Roughly 10" thick hard crust layer was observed on ground, with roughly a foot of fresh now on top of that. No propagation in pits at mid elevations. Strong winds at upper elevations were cross loading/scouring western slopes. Southerly aspects/exposed areas had noticeably less snow.

Region Cooke City Location (from list) COOKE CITY Observer Name Ted Grover
