

Small natural south of Cooke

Woody Ridge

Cooke City

1/9/2021

Code

SS-N-R1-D1-O

Elevation

10000

Aspect

NE

Latitude

44.97390

Longitude

-109.92400

Notes

From email: "I was skiing in Hayden Creek yesterday 20210109 with two others. We found widespread poor structure across the E face of the sub with some failure upon isolation down 65-80cm on 2-3mm faceted crystals HS varied from 110-230cm. We also saw one small R1D1 pocket that pulled out seemingly at the same depth as the aforementioned faceted crystals in slightly steeper and rockier terrain. No photo. The avalanche was on a ENE [aspect](#) on Hayden Peak."
