Wind slabs mid-slope at Bridger Bowl

Bridger Bowl Bridger Range 11/18/2022 Code AS-R1-D1 Latitude 45.81500 Longitude -110.92300 Notes

From obs: "triggered a small wind slab in sluice box today, this was not a surprise as all of the wind loaded areas had shown cracking and instability on the way up, though these other areas exhibited the same instability, this little pocket in sluice was the only spot steep enough to run."

submitted to us via IG: "triggered this large wind slab below Bridger Lift this morning [11/18]. It propagated quite a ways."
