

Obs from the Throne

Date

Thu, 03/09/2023 - 11:25

Activity

Skiing

We skinned up the east face of the Throne and dug at the top of the east face (8100 ft, east [aspect](#)) and again on the north facing slope at top of the throne itself (8300 ft, north [aspect](#)). Snow depth of ~7 ft on the east face and ~4 on the north. ECTX in both pits. No cracking, collapsing, or other signs of instability. No avalanches observed. Little wind effect in the new snow. South aspects starting to get a surface crust, no crust on east or north.

Region

Bridger Range

Location (from list)

The Throne

Observer Name

Ian Hoyer
