

Thin, warming snowpack in Hyalite

Date

Sat, 01/27/2024 - 11:30

Activity

Skiing

Went for a walk on skis in the low-elevation meadows below Blackmore and Elephant Mountain. Observed roller balls and snow glopping to our skins. Dug on a small NE facing test slope at 7760'. HS 48cm, ECTN12 & CT10 Q3 up 27cm on what looked like an old layer of buried surface hoar. A nice day for a low angle walk.

Region

Northern Gallatin

Location (from list)

Hyalite - main fork

Observer Name

E. Donahue
