

Natural Avalanches Alex Lowe

Date

Sat, 03/09/2024 - 13:25

Activity

Snowboarding

From the ridge between Blackmore and Elephant we saw multiple natural large slab avalanches in the upper South Cottonwood drainage. More natural avalanches not shown, mostly on northerly aspects. Appeared fairly recent and deep. Decided against skiing Alex Lowe and opted for good turns on Blackmore. Warm with moderate/strong southwest winds, minor transport.

Region

Northern Gallatin

Location (from list)

Alex Lowe Peak

Observer Name

Logan Gabrielson
