Notes

From obs: "Spotted two fresh natural slides, one within Divide cirque on a NE [aspect](#) @ ~9,800 (D1, R1), and another on the N face of Hyalite @ ~10,200ft. that was mostly out of view, but could be estimated around similar size and destructiveness. These seem to have occurred within the last 24 hours, or after snowfall, likely windslabs on lee slopes."
