

Wind slab in the bridgers

Date

Sun, 02/09/2025 - 13:50

Activity

Skiing

Toured the ramp today and observed an avalanche in hour glass. It was a soft slab that broke in some rocks near the top of the chute, it ran the entire length of the chute and the debris was fairly large (d1.5). The crown looked to be between 8" and 1.5 ft, and was about 30 ft wide.

Region

Bridger Range

Observer Name

Jay Alford
